## Table of Contents

1	Introduction.....	4
2	Certification Examination Structure.....	4
3	Syllabus Structure .....	4
	Appendix A: Soft Skills and Assessment Management .....	5
	Appendix B: Core Technical Skills .....	6
	Appendix C: Background Information Gathering & Open Source .....	8
	Appendix D: Networking Equipment .....	9
	Appendix E: Microsoft Windows Security Assessment .....	11
	Appendix F: Unix Security Assessment .....	13
	Appendix G: Web Technologies .....	15
	Appendix H: Web Testing Methodologies.....	16
	Appendix I: Web Testing Techniques.....	18
	Appendix J: Databases .....	19

## Version History

Version	Date	Authors	Status
1.0	27 May 2016	Technical Committee and Assessors Panel	Internal Review
2.0	2 August 2016	Technical Committee and Assessors Panel	Public Release

## Document Review

Reviewer	Position
Chair	Technical Committee / Assessors Panel
Chair	CREST Board

## 1 Introduction

The technical syllabus identifies at a high level the technical skills and knowledge that CREST expects candidates to possess for the Certification Examinations. There are two alternate Certification Examinations for the Crest Certified Tester (CCT) certification.

### Crest Certified Tester (CCT)

- The (CCT) Infrastructure Certification Examination tests candidates' knowledge and expertise in assessing operating systems, common network services and general network infrastructure security.
- The (CCT) Web Application Certification Examination tests candidates' knowledge and expertise in assessing web applications.

Both Certification Examinations also cover a common set of core skills and knowledge; success at either will confer CREST Certified Tester status to the individual.

## 2 Certification Examination Structure

### Crest Certified Tester (CCT)

The Certification Examination has two components: a written paper and a practical assessment. The written paper consists of two sections: a set of multiple choice questions and a selection of long form questions that will require longer written answers. The practical assessment tests candidates' hands-on penetration testing methodology and skills against reference networks, hosts and applications.

The *Notes for Candidates (CCT)* document for the Certification Examinations provides further information regarding the Certification Examinations in general and the skill areas that will be assessed within the practical components.

## 3 Syllabus Structure

The syllabus is divided into ten knowledge groups (Appendices A to J below), each of which is subdivided into specific skill areas.

For each skill area, CREST has indicated where and how the area will be assessed: in which Certification Examination (Application or Infrastructure) and in which component (Written Multiple Choice, Written Long Form, or Practical).

Within the tables, the following acronyms apply:

<b>CCT ACE</b>	Application Certification Examination
<b>CCT ICE</b>	Infrastructure Certification Examination
<b>MC</b>	Written Multiple Choice
<b>LF</b>	Written Long Form
<b>P</b>	Practical

## Appendix A: Soft Skills and Assessment Management

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
A1	Engagement Lifecycle	<p>Benefits and utility of penetration testing to the client.</p> <p>Structure of penetration testing, including the relevant processes and procedures.</p> <p>Concepts of infrastructure testing and application testing, including black box and white box formats.</p> <p>Project closure and debrief</p>	MC	MC
A2	Law & Compliance	<p>Knowledge of pertinent legal issues.</p> <p>Impact of this legislation on penetration testing activities.</p> <p>Awareness of sector-specific regulatory issues.</p>	MC	MC
A3	Scoping	<p>Understanding client requirements.</p> <p>Scoping project to fulfil client requirements.</p> <p>Accurate timescale scoping.</p> <p>Resource planning.</p>	MC	MC
A4	Understanding Explaining and Managing Risk	<p>Knowledge of additional risks that penetration testing can present.</p> <p>Levels of risk relating to penetration testing, the usual outcomes of such risks materialising and how to mitigate the risks.</p> <p>Effective planning for potential DoS conditions.</p>	MC	MC
A5	Record Keeping, Interim Reporting & Final Results	<p>Understanding reporting requirements.</p> <p>Understanding the importance of accurate and structured record keeping during the engagement.</p>	<p>MC</p> <p>P</p>	<p>MC</p> <p>P</p>

## Appendix B: Core Technical Skills

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
B1	IP Protocols	IP protocols: IPv4 and IPv6, TCP, UDP and ICMP. Awareness that other IP protocols exist.	MC	MC
B2	Network Architectures	Varying networks types that could be encountered during a penetration test: <ul style="list-style-type: none"> <li>CAT 5 / Fibre</li> <li>10/100/1000baseT</li> <li>Token ring</li> <li>Wireless (802.11)</li> </ul> Security implications of shared media, switched media and VLANs.	MC	MC
B3	Network Routing	Network routing protocols RIP, OSPF, and IGRP/EIGRP.	N/A	MC
B4	Network Mapping & Target Identification	Analysis of output from tools used to map the route between the engagement point and a number of targets. Network sweeping techniques to prioritise a target list and the potential for false negatives.	MC P	MC LF P
B5	Interpreting Tool Output	Interpreting output from port scanners, network sniffers and other network enumeration tools.	MC	MC
B6	Filtering Avoidance Techniques	The importance of egress and ingress filtering, including the risks associated with outbound connections.	MC	MC
B7	Packet Crafting	Packet crafting to meet a particular requirement: <ul style="list-style-type: none"> <li>Modifying source ports</li> <li>Spoofing IP addresses</li> <li>Manipulating TTL's</li> <li>Fragmentation</li> <li>Generating ICMP packets</li> </ul>	MC	MC
B8	OS Fingerprinting	Remote operating system fingerprinting; active and passive techniques.	MC	MC P

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
B9	Application Fingerprinting and Evaluating Unknown Services	Determining server types and network application versions from application banners.  Evaluation of responsive but unknown network applications.	MC	MC P
B10	Network Access Control Analysis	Reviewing firewall rule bases and network access control lists.	MC	MC LF
B11	Cryptography	Differences between encryption and encoding.  Symmetric / asymmetric encryption  Encryption algorithms: DES, 3DES, AES, RSA, RC4.  Hashes: SHA1 and MD5  Message Integrity codes: HMAC	MC P	MC
B12	Applications of Cryptography	SSL, IPsec, SSH, PGP  Common wireless (802.11) encryption protocols: WEP, WPA, TKIP	MC	MC LF
B13	File System Permissions	File permission attributes within Unix and Windows file systems and their security implications.  Analysing registry ACLs.	MC	MC P
B14	Audit Techniques	Listing processes and their associated network sockets (if any).  Assessing patch levels.  Finding interesting files.	MC	MC P

## Appendix C: Background Information Gathering & Open Source

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
C1	Registration Records	Information contained within IP and domain registries (WHOIS).	MC	MC
C2	Domain Name Server (DNS)	DNS queries and responses DNS zone transfers Structure, interpretation and analysis of DNS records: <ul style="list-style-type: none"> <li>• SOA</li> <li>• MX</li> <li>• TXT</li> <li>• A</li> <li>• NS</li> <li>• PTR</li> <li>• HINFO</li> <li>• CNAME</li> </ul>	MC	MC P
C3	Customer Web Site Analysis	Analysis of information from a target web site, both from displayed content and from within the HTML source.	MC P	MC
C4	Google Hacking and Web Enumeration	Effective use of search engines and other public data sources to gain information about a target.	MC	MC
C5	NNTP Newsgroups and Mailing Lists	Searching newsgroups or mailing lists for useful information about a target.	MC	MC
C6	Information Leakage from Mail & News Headers	Analysing news group and e-mail headers to identify internal system information.	MC	MC

## Appendix D: Networking Equipment

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
D1	Management Protocols	Weaknesses in the protocols commonly used for the remote management of devices: <ul style="list-style-type: none"> <li>• Telnet</li> <li>• Web based protocols</li> <li>• SSH</li> <li>• SNMP (covering network information enumeration and common attacks against Cisco configurations)</li> <li>• TFTP</li> <li>• Cisco Reverse Telnet</li> <li>• NTP</li> </ul>	MC	MC LF P
D2	Network Traffic Analysis	Techniques for local network traffic analysis. Analysis of network traffic stored in PCAP files.	N/A	MC LF
D3	Networking Protocols	Security issues relating to the networking protocols: <ul style="list-style-type: none"> <li>• ARP</li> <li>• DHCP</li> <li>• CDP</li> <li>• HSRP</li> <li>• VRRP</li> <li>• VTP</li> <li>• STP</li> <li>• TACACS+</li> </ul>	N/A	MC LF P
D4	IPSec	Enumeration and fingerprinting of devices running IPSec services.	N/A	MC P
D5	VoIP	Enumeration and fingerprinting of devices running VoIP services. Knowledge of the SIP protocol.	N/A	MC P

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
D6	Wireless	<p>Enumeration and fingerprinting of devices running Wireless (802.11) services.</p> <p>Knowledge of various options for encryption and authentication, and the relative methods of each.</p> <ul style="list-style-type: none"> <li>• WEP</li> <li>• TKIP</li> <li>• WPA/WPA2</li> <li>• EAP/LEAP/PEAP</li> </ul>	N/A	MC
D7	Configuration Analysis	<p>Analysing configuration files from the following types of Cisco equipment:</p> <ul style="list-style-type: none"> <li>• Routers</li> <li>• Switches</li> </ul> <p>Interpreting the configuration of other manufacturers' devices.</p>	N/A	MC LF P

## Appendix E: Microsoft Windows Security Assessment

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
E1	Domain Reconnaissance	Identifying domains/workgroups and domain membership within the target network. Identifying key servers within the target domains. Identifying and analysing internal browse lists. Identifying and analysing accessible SMB shares	MC	MC P LF
E2	User Enumeration	Identifying user accounts on target systems and domains using NetBIOS, SNMP and LDAP.	N/A	MC P
E3	Active Directory	Active Directory Roles (Global Catalogue, Master Browser, FSMO) Reliance of AD on DNS and LDAP Group Policy (Local Security Policy)	MC	MC P
E4	Windows Passwords	Password policies (complexity, lockout policies) Account Brute Forcing Hash Storage (merits of LANMAN, NTLMv1 / v2) Offline Password Analysis (rainbow tables / hash brute forcing)	MC P	MC LF P

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
E5	Windows Vulnerabilities	<p>Knowledge of remote windows vulnerabilities, particularly those for which robust exploit code exists in the public domain.</p> <p>Knowledge of local windows privilege escalation vulnerabilities and techniques.</p> <p>Knowledge of common post exploitation activities:</p> <ul style="list-style-type: none"> <li>• obtain password hashes, both from the local SAM and cached credentials</li> <li>• obtaining locally-stored clear-text passwords</li> <li>• crack password hashes</li> <li>• check patch levels</li> <li>• derive list of missing security patches</li> <li>• reversion to previous state</li> </ul>	MC P	MC LF P
E6	Windows Patch Management Strategies	<p>Knowledge of common windows patch management strategies:</p> <ul style="list-style-type: none"> <li>• SMS</li> <li>• SUS</li> <li>• WSUS</li> <li>• MBSA</li> </ul>	N/A	MC P
E7	Desktop Lockdown	<p>Knowledge and understanding of techniques to break out of a locked down Windows desktop / Citrix environment.</p> <p>Privilege escalation techniques.</p>	N/A	MC P
E8	Exchange	Knowledge of common attack vectors for Microsoft Exchange Server.	N/A	MC
E9	Common Windows Applications	Knowledge of significant vulnerabilities in common windows applications for which there is public exploit code available.	N/A	MC P

## Appendix F: Unix Security Assessment

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
F1	User enumeration	<p>Discovery of valid usernames from network services commonly running by default:</p> <ul style="list-style-type: none"> <li>• rusers</li> <li>• rwho</li> <li>• SMTP</li> <li>• finger</li> </ul> <p>Understand how finger daemon derives the information that it returns, and hence how it can be abused.</p>	N/A	MC P
F2	Unix vulnerabilities	<p>Recent or commonly-found Solaris vulnerabilities, and in particular those for which there is exploit code in the public domain.</p> <p>Recent or commonly-found Linux vulnerabilities, and in particular those for which there is exploit code in the public domain.</p> <p>Use of remote exploit code and local exploit code to gain root access to target host</p> <p>Common post-exploitation activities:</p> <ul style="list-style-type: none"> <li>• exfiltrate password hashes</li> <li>• crack password hashes</li> <li>• check patch levels</li> <li>• derive list of missing security patches</li> <li>• reversion to previous state</li> </ul>	N/A	MC LF P
F3	FTP	<p>FTP access control</p> <p>Anonymous access to FTP servers</p> <p>Risks of allowing write access to anonymous users.</p>	N/A	MC P
F4	Sendmail / SMTP	<p>Valid username discovery via EXPN and VRFY</p> <p>Awareness of recent Sendmail vulnerabilities; ability to exploit them if possible</p> <p>Mail relaying</p>	N/A	MC LF P

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
F5	Network File System (NFS)	<p>NFS security: host level (exports restricted to particular hosts) and file level (by UID and GID).</p> <p>Root squashing, nosuid and noexec options.</p> <p>File access through UID and GID manipulation.</p>	N/A	MC P
F6	R* services	<p>Berkeley r* service:</p> <ul style="list-style-type: none"> <li>• access control (/etc/hosts.equiv and .rhosts)</li> <li>• trust relationships</li> </ul> <p>Impact of poorly-configured trust relationships.</p>	N/A	MC P
F7	X11	<p>X Windows security and configuration; host-based vs. user-based access control.</p>	N/A	MC P LF
F8	RPC services	<p>RPC service enumeration</p> <p>Common RPC services</p> <p>Recent or commonly-found RPC service vulnerabilities.</p>	N/A	MC P
F9	SSH	<p>Identify the types and versions of SSH software in use</p> <p>Securing SSH</p> <p>Versions 1 and 2 of the SSH protocol</p> <p>Authentication mechanisms within SSH</p>	N/A	MC P

## Appendix G: Web Technologies

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
G1	Web Server Operation	How a web server functions in terms of the client/server architecture. Concepts of virtual hosting and web proxies.	MC	MC
G2	Web Servers & their Flaws	Common web servers and their fundamental differences and vulnerabilities associated with them: <ul style="list-style-type: none"> <li>• IIS</li> <li>• Apache (and variants)</li> </ul>	MC P	MC P
G3	Web Enterprise Architectures	Design of tiered architectures. The concepts of logical and physical separation. Differences between presentation, application and database layers.	MC	MC
G4	Web Protocols	Web protocols: HTTP, HTTPS, SOAP. All HTTP web methods and response codes. HTTP Header Fields relating to security features	MC P	MC P
G5	Web Mark-up Languages	Web mark-up languages: HTML and XML.	MC	MC
G6	Web Programming Languages	Common web programming languages: JSP, ASP, PHP, CGI based Perl and JavaScript.	MC	MC
G7	Web Application Servers	Vulnerabilities in common application frameworks, servers and technologies: .NET, J2EE, Coldfusion, Ruby on Rails and AJAX.	MC P	N/A
G8	Web APIs	Application interfaces: CGI, ISAPI filters and Apache modules.	MC P	MC
G9	Web Sub-Components	Web architecture sub-components: Thin/Thick web clients, servlets and applets, Active X. Flash Application Testing .Net Thick Clients Java Applets Decompilation of client-side code	MC P	N/A

## Appendix H: Web Testing Methodologies

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
H1	Web Application Reconnaissance	<p>Benefits of performing application reconnaissance.</p> <p>Discovering the structure of web applications.</p> <p>Methods to identify the use of application components defined in G1 to G9.</p>	MC LF	MC
H2	Threat Modelling and Attack Vectors	<p>Simple threat modelling based on customer perception of risk.</p> <p>Relate functionality offered by the application to potential attack vectors.</p>	MC	MC
H3	Information Gathering from Web Mark-up	<p>Examples of the type of information available in web page source that may prove useful to an attacker:</p> <ul style="list-style-type: none"> <li>• Hidden Form Fields</li> <li>• Database Connection Strings</li> <li>• Credentials</li> <li>• Developer Comments</li> <li>• Other included files</li> <li>• Authenticated-only URLs</li> </ul>	MC P LF	MC
H4	Authentication Mechanisms	Common pitfalls associated with the design and implementation of application authentication mechanisms.	MC LF P	MC
H5	Authorisation Mechanisms	Common pitfalls associated with the design and implementation of application authorisation mechanisms.	MC LF P	MC
H6	Input Validation	<p>The importance of input validation as part of a defensive coding strategy.</p> <p>How input validation can be implemented and the differences between white listing, black listing and data sanitisation.</p>	MC LF P	MC
H7	Application Fuzzing	<p>Fuzzing and its relevance within web-app penetration testing.</p> <p>The use of fuzz strings and their potential effects.</p> <p>Potential dangers of fuzzing web applications.</p>	MC LF P	N/A

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
H8	Information Disclosure in Error Messages	How error messages may indicate or disclose useful information.	MC	MC
H9	Use of Cross Site Scripting Attacks	Potential implications of a cross site scripting vulnerability. Ways in which the technique can be used to benefit an attacker.	MC LF P	MC
H10	Use of Injection Attacks	Potential implications of injection vulnerabilities: <ul style="list-style-type: none"> <li>• SQL injection</li> <li>• LDAP injection</li> <li>• Code injection</li> <li>• XML injection</li> </ul> Ways in which these techniques can be used to benefit an attacker.	MC LF P	MC
H11	Session Handling	Common pitfalls associated with the design and implementation of session handling mechanisms.	MC LF P	MC
H12	Encryption	Common techniques used for encrypting data in transit and data at rest, either on the client or server side. Identification and exploitation of Encoded values (e.g. Base64) and Identification and exploitation of Cryptographic values (e.g. MD5 hashes) Identification of common SSL vulnerabilities	MC P	MC
H13	Source Code Review	Common techniques for identifying and reviewing deficiencies in the areas of security.	MC LF P	MC

## Appendix I: Web Testing Techniques

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
I1	Web Site Structure Discovery	<p>Spidering tools and their relevance in a web application test for discovering linked content.</p> <p>Forced browsing techniques to discover default or unlinked content.</p> <p>Identification of functionality within client-side code</p>	P	N/A
I2	Cross Site Scripting Attacks	<p>Arbitrary JavaScript execution.</p> <p>Using Cross Site Scripting techniques to obtain sensitive information from other users.</p> <p>Phishing techniques.</p>	P	N/A
I3	SQL Injection	<p>Determine the existence of an SQL injection condition in a web application.</p> <p>Determine the existence of a blind SQL injection condition in a web application.</p> <p>Exploit SQL injection to enumerate the database and its structure.</p> <p>Exploit SQL injection to execute commands on the target server.</p>	P	N/A
I4	Session ID Attacks	<p>Investigate session handling within a web application.</p> <p>Harvest and analyse a number of session identifiers for weaknesses.</p>	P	N/A
I5	Fuzzing	<p>The concept of fuzzing within a web application testing methodology.</p> <p>Common fuzzing tools.</p>	P	N/A
I6	Parameter Manipulation	<p>Parameter manipulation techniques, particularly the use of client side proxies.</p>	P	N/A
I7	Data Confidentiality & Integrity	<p>Identifying weak (or missing) encryption.</p> <p>Identifying insecure SSL configurations.</p> <p>Identify insecure use of encoding techniques</p>	P LF	N/A
I8	Directory Traversal	<p>Identifying directory traversal vulnerabilities within applications.</p>	P	N/A
I9	File Uploads	<p>Identifying common vulnerabilities with file upload capabilities within applications.</p>	P	N/A

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
I10	Code Injection	Investigate and exploitation of code injection vulnerabilities within web applications	P	MC
I11	CRLF Attacks	Assessment of web applications for CRLF vulnerabilities	P	MC
I12	Application Logic Flaws	Assessing the logic flow within an application and the potential for subverting the logic.	P	MC

## Appendix J: Databases

ID	Skill	Details	How Examined	
			CCT ACE	CCT ICE
J1	Microsoft SQL Server	Knowledge of common attack vectors for Microsoft SQL Server. Understanding of privilege escalation and attack techniques for a system compromised via database connections.	MC P	MC P
J2	Oracle RDBMS	Derivation of version and patch information from hosts running Oracle software.  Default Oracle accounts.	MC P	MC P
J3	Web / App / Database Connectivity	Common databases (MS SQL server, Oracle, MySQL and Access) and the connection and authentication methods used by web applications.	MC P	MC P
